

Prenos toplote:

- prevajanje +
- konvekcija - $\rightarrow$ razlika gostot, Φ_m
- sevanje +++ $\rightarrow$ kasneje - EN

$$P = \lambda S \frac{T_2 - T_1}{d}$$

$$j_Q = \frac{dP}{dS} = -\lambda \frac{T_2 - T_1}{d}$$

$\downarrow$
gostota topl. toka

$$dP = \int \vec{j}_Q \cdot d\vec{S}$$

$$\boxed{\vec{j}_{10} = -\lambda \frac{dT}{dx}}$$

2D, 3D:

$$\lambda \left[\frac{W}{m \cdot K} \right]$$

snov	$\lambda \left[\frac{W}{m \cdot K} \right]$
pirogel	$15 \cdot 10^{-3}$
zrak	$25 \cdot 10^{-3}$
izolatorji	$50 \cdot 10^{-3}$
Cu	390
diamant $\rightarrow$ C	>2000
PG	700
TPG	1700
opekar, H ₂ O*	0,6
beton	1
Ag	410
Fe	50

Konvekcija

$$\rho = \rho(T)$$

Sevanje

EN valovanje

Sonce $j_0 = 1,4 \frac{kW}{m^2}$ (na vrhu atmosfere)

- če sončno - na tleh $1 \frac{kW}{m^2}$

- če oblačno - na tleh $0,1 \frac{kW}{m^2}$
