za baze vzamemo $l_{n,i}(x) = \prod_{\substack{k=0 \\ k \neq i}}^n \frac{x - x_k}{x_i - x_k}$

• od kje pride $l_{n,i}$?

1) želimo, da ima polinom ničle v x_k , $k \neq i \rightarrow l_{n,i}(x) = C(x - x_0)(x - x_1) \dots (x - x_{i-1}) \cdot$
 $\cdot (x - x_{i+1}) \dots (x - x_n)$

2) želimo, da je $l_{n,i}(x_i) = 1$

$$\rightarrow 1 = C(x_i - x_0) \dots (x_i - x_{i-1})(x_i - x_{i+1}) \dots (x_i - x_n)$$
